BLACK

Is sold 500 miles from Coal Creek is easily answered by those who have used it.

In the first place, it is very rich in heating qualities, and at the same time hard and clean. To heat a room of a given size will, of course, require a certain amount of carbon; now, if you have a pure coal like the Black Diamond, the room will be warm and comfortable with the least amount of coal, while if the cont is of a poor quality it will take from fifty to one hundred per cent, more to give out the same heat, thereby materially increasing the cost of your fuel.

This is the reason why this coal is directly in contact with coals that are within five or ien miles of the cities and towns where the Black Diamond is sold.
